PROJECTS

- **Inventory Management System**

The Inventory Management System is a web-based application designed to help businesses efficiently manage their inventory, track stock levels, and streamline their supply chain operations. The system provides functionalities such as product tracking, stock monitoring, sales tracking, and supplier management. It aims to reduce manual errors, increase operational efficiency, make informed business decisions. The application features detailed reporting on inventory performance. With a user-friendly interface and scalability in mind, the system offers businesses a simple yet powerful tool to manage their products and improve overall productivity. The Inventory Management System ultimately supports better decision making and ensures smooth business operations.

- **Kalyan Jewellers in Python**

Conditional statement concept has been used.

Condition concept in Python through which, we provide discounts on the basis of customer age and gender.
